Na aula passada...

Medidas de dispersão dos dados:

- Amplitude;
- Amplitude entre os quartis;
- Variância e desvio padrão.

Distribuição dos dados

Dados com Distribuição Normal

Exemplos de dados normais

- Altura das pessoas;
- Notas de prova;
- Duração da gravidez;
- Salário;
- Tamanho de peças produzidas em uma fábrica;
- etc...

Propriedades de uma distribuição normal

- Formato de sino;
- Simétrico;
- Média = Mediana = Moda;
- Regra do desvio padrão.

Regra do desvio padrão

Regra do desvio padrão

Tirei nota 75. Quantos alunos tiraram uma nota menor que a minha? 84%

Quantos tiraram uma nota acima que a minha? 16%

Regra do desvio padrão

Quero estar entre os 5% dos alunos que tiraram a maior nota. Que nota eu devo tirar? Resposta: 90

Regra do desvio padrão

Se eu tirei 80, quantos alunos ficaram abaixo da minha nota?

Função da distribuição normal

$$F(x) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{(x-\mu)^2}{2\sigma^2}}$$

Se eu tirei 80, quantos desvios padrão estou da média?

Z-score

Z-score → unidades de desvio padrão de um determinado valor em um conjunto de dados de média μ e desvio padrão σ .

$$z = \frac{x - \mu}{\sigma}$$

O que acontece se eu aplicar o z-score em todo dado...?

O que acontece se eu aplicar o z-score em todo dado...?

Qual é a média e o desvio padrão dos dados transformados em z-score?

$$\mu = 0$$

$$\sigma = 1$$

Calcule o z-score para cada valor de um outro conjunto de dados...

Qual foi a média?

Qual foi o desvio padrão?

Quando os dados são transformados em z-score...

Eles se transformam em um conjunto de dados de:

- $\mu = 0$
- $\sigma = 1$

Transformar os dados em Z-score é uma forma de padronizar (normalizar) os dados;

Gera uma distribuição normal padrão.

Área sob a curva de uma distribuição normal padrão

$$f(x) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{1}{2}\left(\frac{x-\mu}{\sigma}\right)^2} \quad -\infty \leq x \leq \infty$$

$$= \frac{1}{1 \times \sqrt{2\pi}} e^{-\frac{1}{2}\left(\frac{x-0}{1}\right)^2} \quad -\infty \leq x \leq \infty$$

$$= \frac{1}{\sqrt{2\pi}} e^{-\frac{1}{2}(z)^2} \quad -\infty \leq z \leq \infty$$

Outra questão

Um radar é utilizado para medir a velocidade dos carros em uma via. As velocidades registradas seguem uma distribuição normal com média de 90 km/h e desvio padrão de 10 km/h. Qual porcentagem dos carros estariam andando a uma velocidade acima de 100 km/h?

A normal distribution curve is shown with a horizontal axis labeled from -3 to 3. The area under the curve to the right of $z = 1$ is shaded in blue. A vertical line is drawn at $z = 1$, and the label z is placed below the axis with an arrow pointing to the line.

Entries in the table give the area under the curve between the mean and z standard deviations above the mean. For example, for $z = 1.25$ the area under the curve between the mean (0) and z is 0.3944.

[illegible]

Mais questão

Para um certo tipo de computador, o tempo de carga de uma bateria segue uma distribuição normal com a média 50h e desvio padrão de 15h. Você possui um desses computadores. Qual a probabilidade do tempo de carga do seu computador esteja entre 50 a 70 horas?

Os valores tabelados do z-score só podem ser utilizados para dados que possuem distribuição normal.

Como saber se seus dados seguem uma distribuição normal?

Como saber se seus dados seguem uma distribuição normal?

Análise visual

- Histogramas e a curva normal

Como saber se seus dados seguem uma distribuição normal?
